

Change history Parking Publications

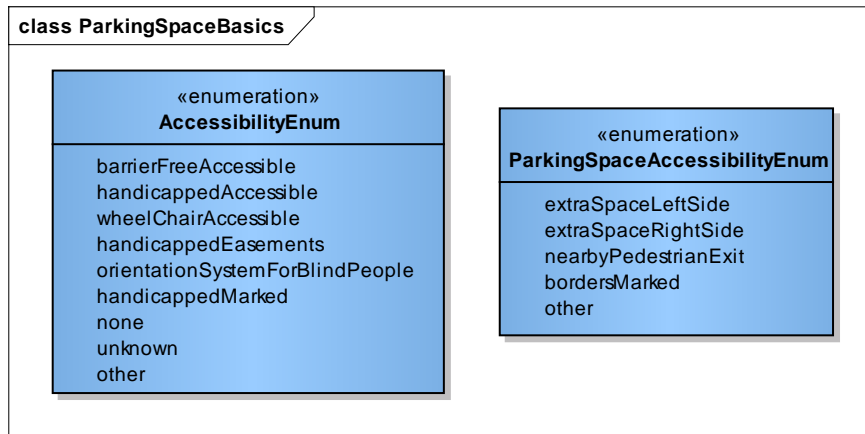

Changes in v1.0a (bug fixing; referred to v1.0)

- Schema only: The attributes of class **DataValue** (which are of Level A) have not been included in the schema before. They have been added now. This effects only the file **ParkingStatusPublication.xsd**
- Enterprise Architect only: There was a visualisation error in the EA-picture for **TariffsAndPayment** that is corrected now. The schema files have been not affected at all.
- Definitions: Two erroneous definitions have been updated (definition of literal **other** from **ParkingUsageScenario** and definition of class **vehicleCountWithinInterval**).

Changes in v1.0 (referred to v0.7)

All pictures in this document refer to the most current version v1.0a!

- Added the literal **unknown** to a number of enumerations for harmonisation with TPEG-PKI
- Changed multiplicity of **parkingLayout** from [0..1] to [0..*]
- **ParkingRoute** is now versioned identifiable. There is a new structure **ParkingRouteByReference**. There is a new dynamic class with Boolean attribute **parkingRouteActive**.
- Changed all Equipments into the singular form (this effected **shower**, **toilet**, **refuseBin**)
- Added literal **overnightAccommodation** to **ServiceFacilityEnum**
- Added literal **publicPhone** to **EquipmentTypeEnum**, added 'public' to **publicCoinPhone** and **publicCardPhone**
- Added attribute **blurredAvailability** (Boolean) to **ParkingRecordStatus**
- Renamed **ElectricChargeUsageType** to **ChargingStationUsageTypeEnum**
- Changes in the extension of **Period**:
 - Purpose: Now it will be possible to define a set of days like "Sundays and Holidays"*
 - Added literal **holidays** to **SpecialDayTypeEnum**
 - Renamed **DayType** to **SpecialDay**
 - Changed role to **DayType** (now **SpecialDay**) to **recurringSpecialDay** with multiplicity [0..*]
 - Added mandatory attribute **intersectWithApplicableDays** (Boolean) with definition: "When true, the period is the intersection of applicable days and this special day. When false, the period is the union of applicable days and this special day."
 - **specialDayType** set mandatory.
- Derived new Enumeration **AccessibilityEnum** (a) from **ParkingSpaceAccessibilityEnum** (b). (a) is of general context and reused in **ParkingAccess**, **ParkingSpaceBasics** and **ParkingEquipmentOrServiceFacility** (new attribute: **accessibility**). Literal **pedestrianBarrierFree** was removed from **AccessCategoryEnum**. (b) keeps some special attributes for a parking space and is only used in **ParkingSpaceBasics**. Some literals in this context are renamed or new. The Boolean attribute **handicappedAccessible** was removed from **ParkingEquipmentOrServiceFacility**.

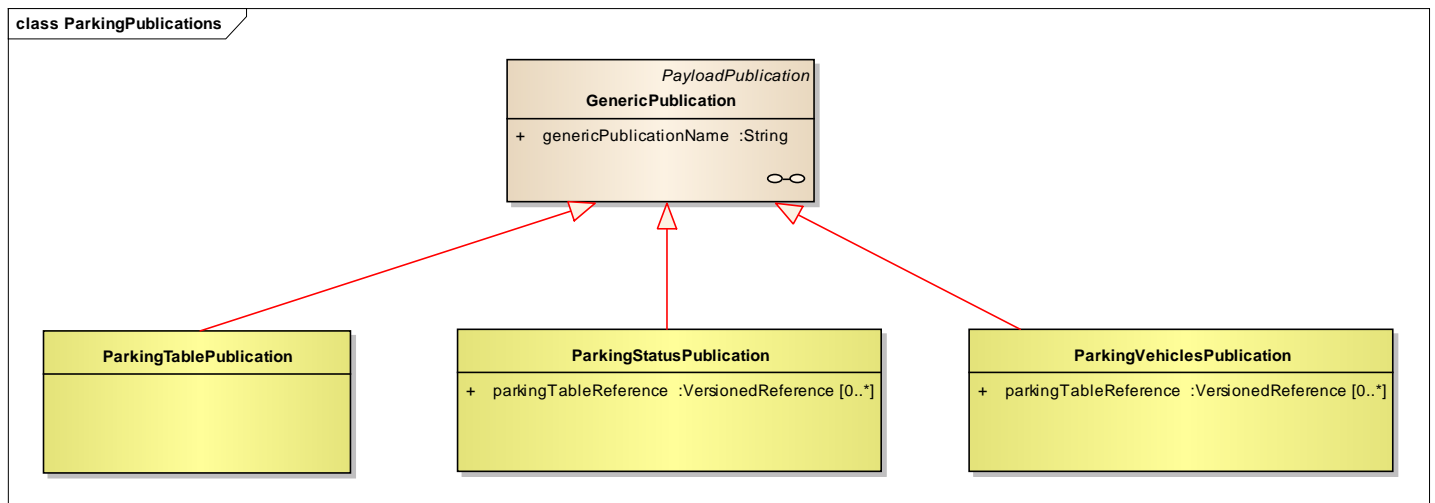

- In the Tarriffs model, changed aggregation from **ChargeBand** to **Period** into **OverallPeriod**, i.e. the **applicablePeriod** can use the complete structure of the Validity model now. The multiplicity for this aggregation is now [0..1].
- Class **Contact** is not abstract any longer and got two new attributes: **contactUnknown** and **contactNotDefined**. Class **OpeningTimes** got two similar new attributes.
- **ParkingOccupancyTrendEnum** got more literals to support TPEG-PKI.
- Added **RoadNode** as a specialisation of **Road** with attribute **junctionName** to support corresponding junction names for accesses (e.g. for truck parkings on motorways).
- Role **primaryRoad** from class **parkingAccess** has now multiplicity [0..*]
- The (existing) role from **ParkingEquipmentOrServiceFacility** to **VehicleCharacterics** got the name **applicableForVehicles**.
- A **ParkingRecord** got a new association to an **Area** with role name **entireArea** to specify an underlaying area this parking record is located in or belongs to. Examples are a state, province, truck parking area etc.
- The attribute **parkingMode** in **TariffsAndPayment** has now multiplicity [0..*]

Changes in v0.7 (referred to v0.5)

(This chapter covers the rest of this document, there is no change history for previous versions)

All pictures in this document refer to the most current version v1.0a!

This document shows the most important changes on the Parking Publications model from version 0.7 in relation to version 0.5, which was the (first) CEN inquiry version. Please note, that this document is not a complete documentation of the model.

Overview of “ParkingPublications”

Renaming

A number of elements have been renamed, to provide shorter names or to sharpen the semantics.

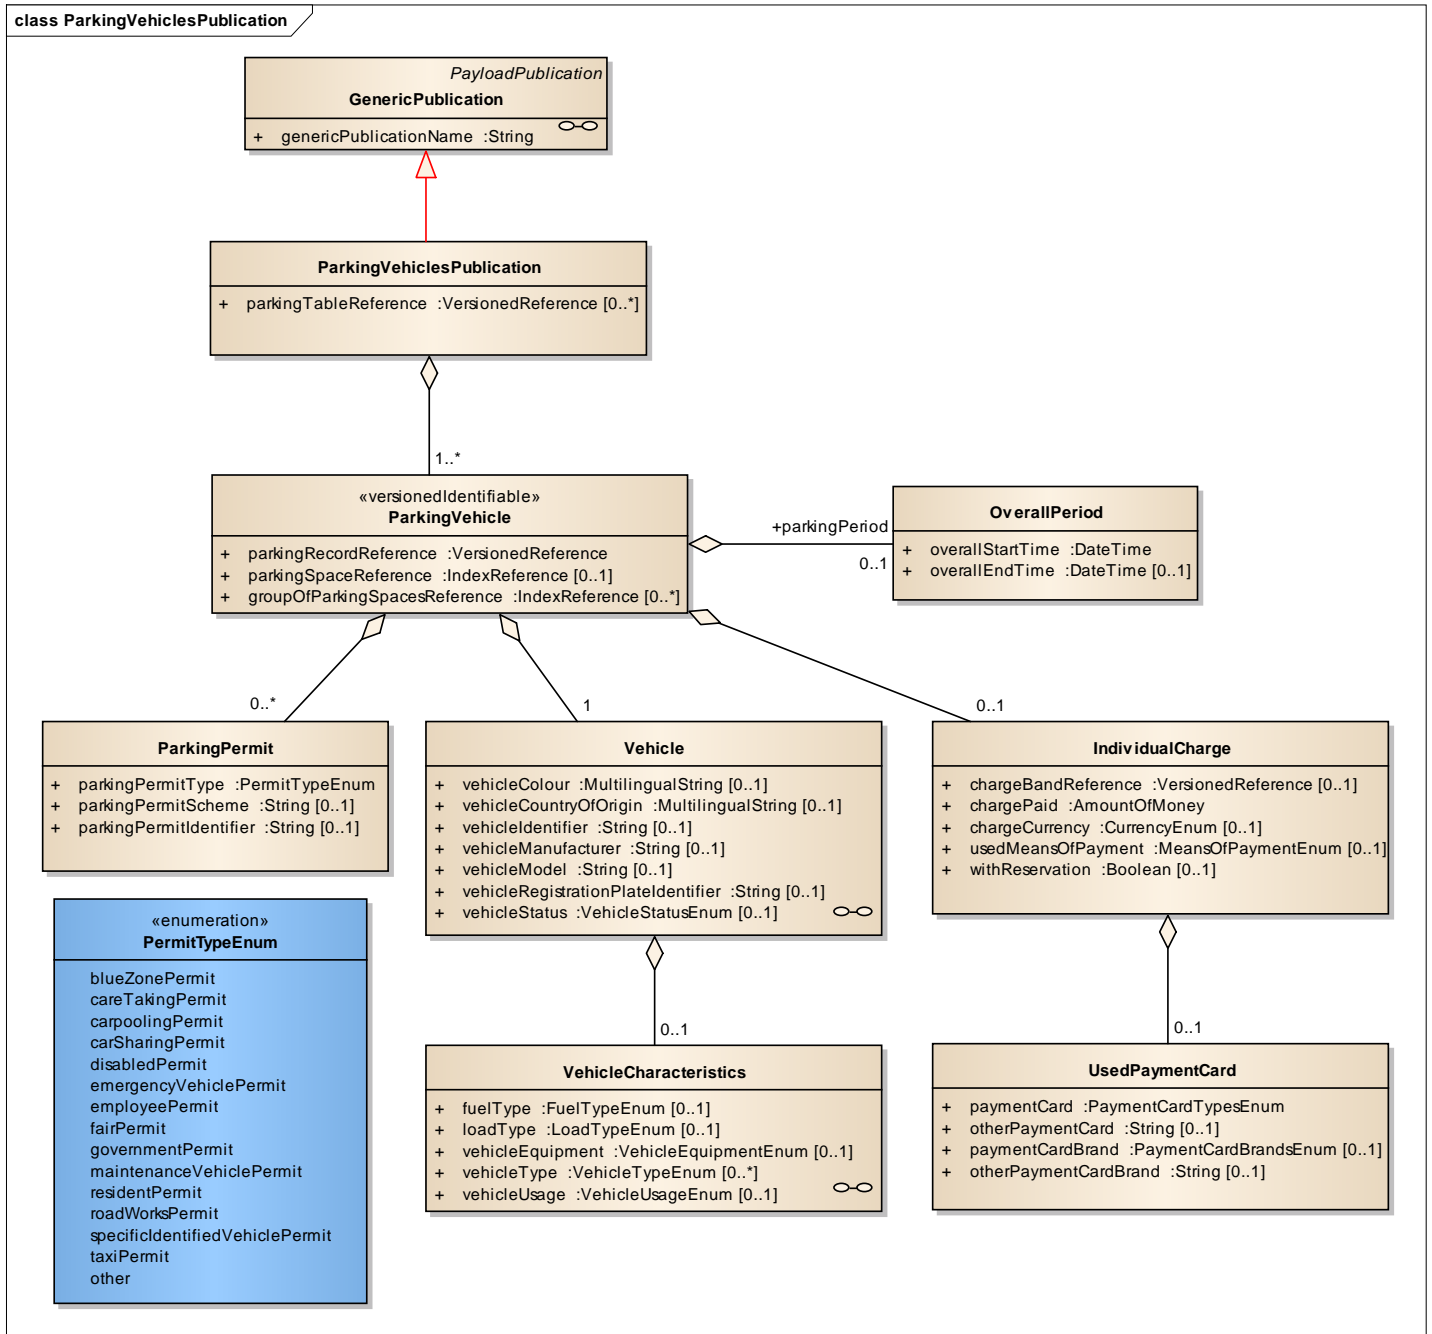

See extra document for a list of these renaming issues.

All pictures in this document include the new names.

ParkingVehiclesPublication (new)

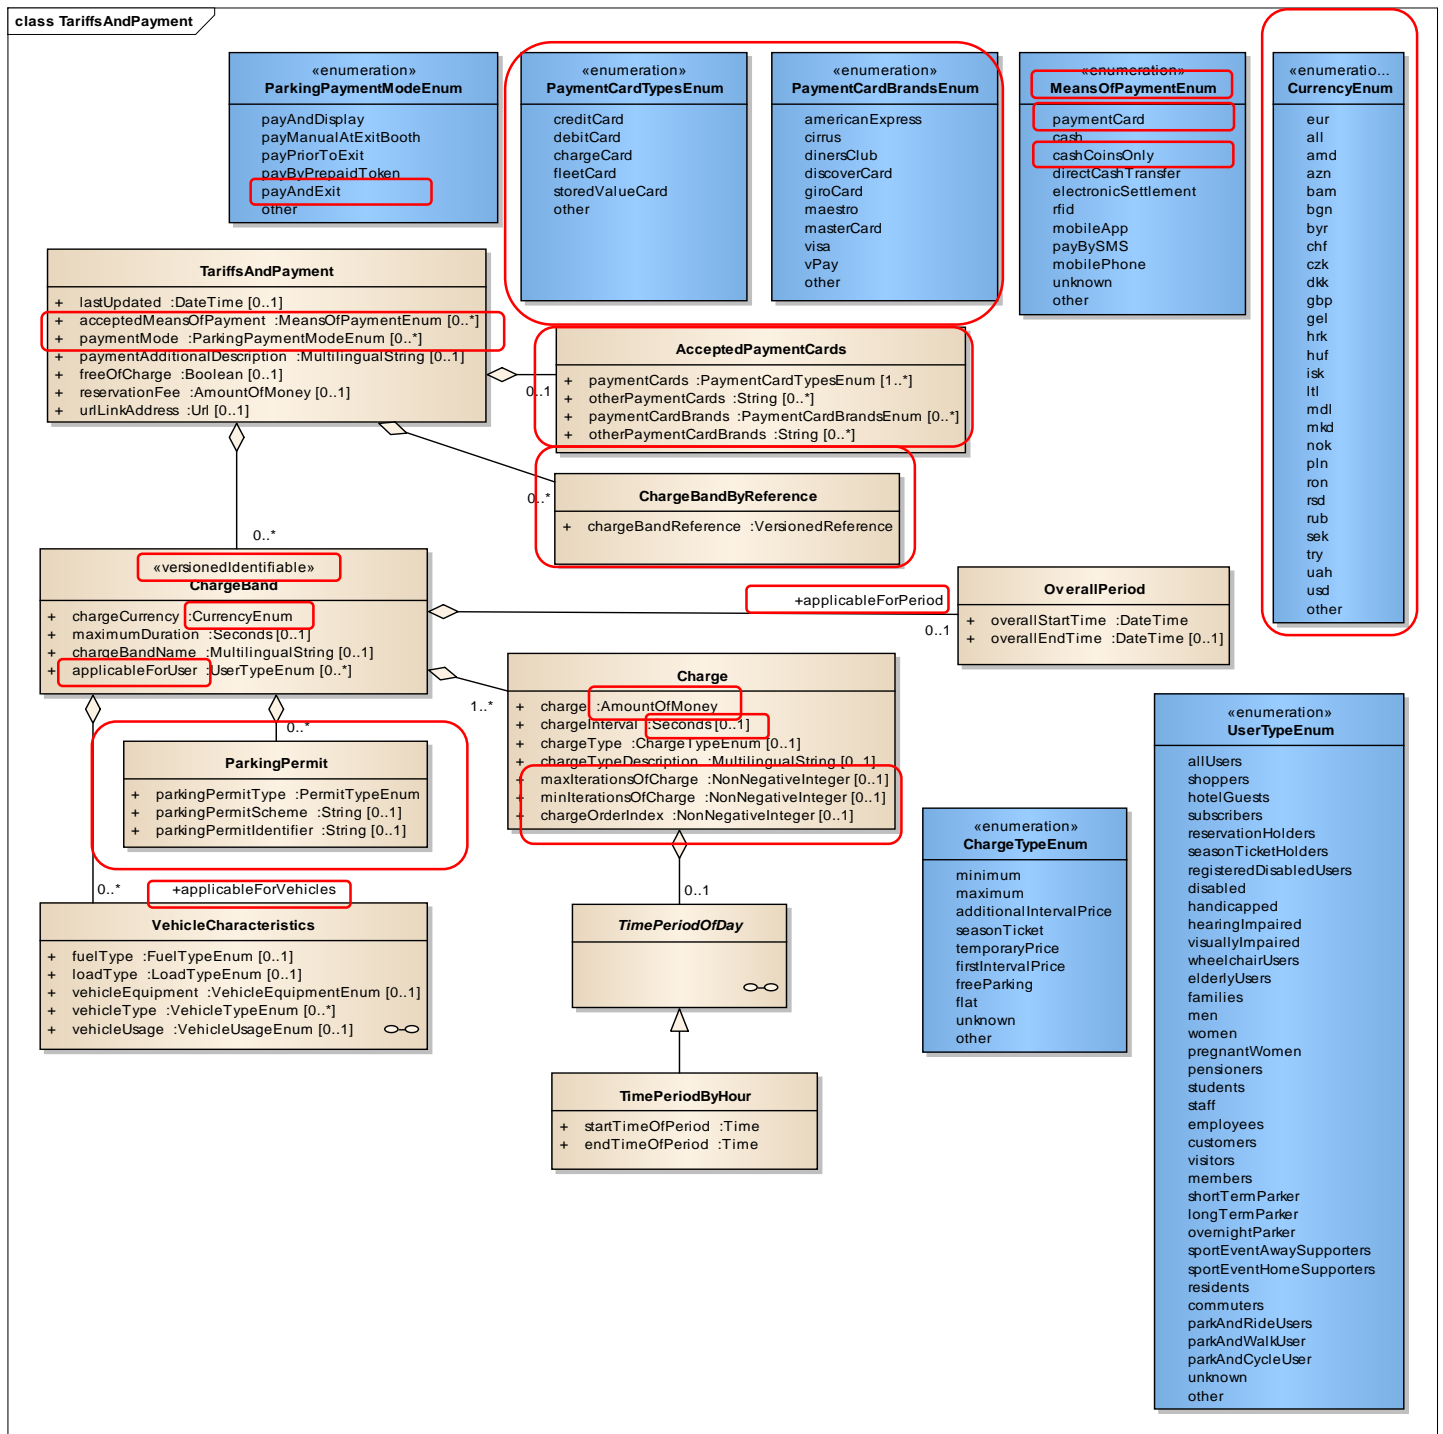

The **ParkingVehicle** is introduced as a new separate publication. See picture for details.

OverallPeriod and **VehicleCharacteristics** are elements from Level A. For **VehicleCharacteristics**, the extension of the parking model (more types, loads etc.) is available.

For **ParkingPermit** see chapter “**Assignment**”.

Tariffs and payment (NL 015, NL 016, NL 023, Belgium)

PaymentMethodEnum was renamed to **MeansOfPayment** (according attribute: **acceptedMeansOfPayment**):

- Added **paymentCard** (as a general term)
- Removed all types of cards → now in **PaymentCardTypesEnum**
- Removed **smartcard** (not useful, it's more a kind of technology)
- Added **cashCoinsOnly**

PaymentModusEnum was renamed to **ParkingPaymentModeEnum**:

- Added **payAndExit** (see also chapter “Entrance / Exit” resp. “Access”)

Added new component **AcceptedPaymentCards**:

Added **PaymentCardsTypeEnum**:

- Literals adopted from Wikipedia: http://en.wikipedia.org/wiki/Payment_card
- There is a String attribute [0..*] for further card types

Added **PaymentCardBrandsEnum**:

- Most popular brands for credit and debit cards
- Brands of fleet- or fuelcards are not included, as this would be an unmanageable list in my opinion
- There is a String attribute [0..*] for further card brands

A **CurrencyEnum** was introduced. It comprises the three character codes of European currencies including Rubel and US\$.

For a **Charge**, a min iteration value and a max iteration value as well as an order attribute were introduced. This is to specify charges like in the following example: The first 2 hours are for free, afterwards, up to 5 hours cost 3 Euros per hour, afterwards 1 Euro each hour.

Their definitions are:

minIterationsOfCharge: This charge must not be applied more often within this ChargeBand than specified in this attribute. Thus it is possible to specify the first hour for free, for example.

maxIterationsOfCharge: This charge must be applied within this ChargeBand at least as often as specified in this attribute. Thus it is possible to specify the first hour in an expensive manner, for example.

chargeOrderIndex: A non-unique index which forms an order for applying charges, i.e. a charge may never be applied afterwards a charge with a higher index. For some indices there is no order-restriction. You can skip charges unless their 'minIterationsOfCharge' is not > 0.

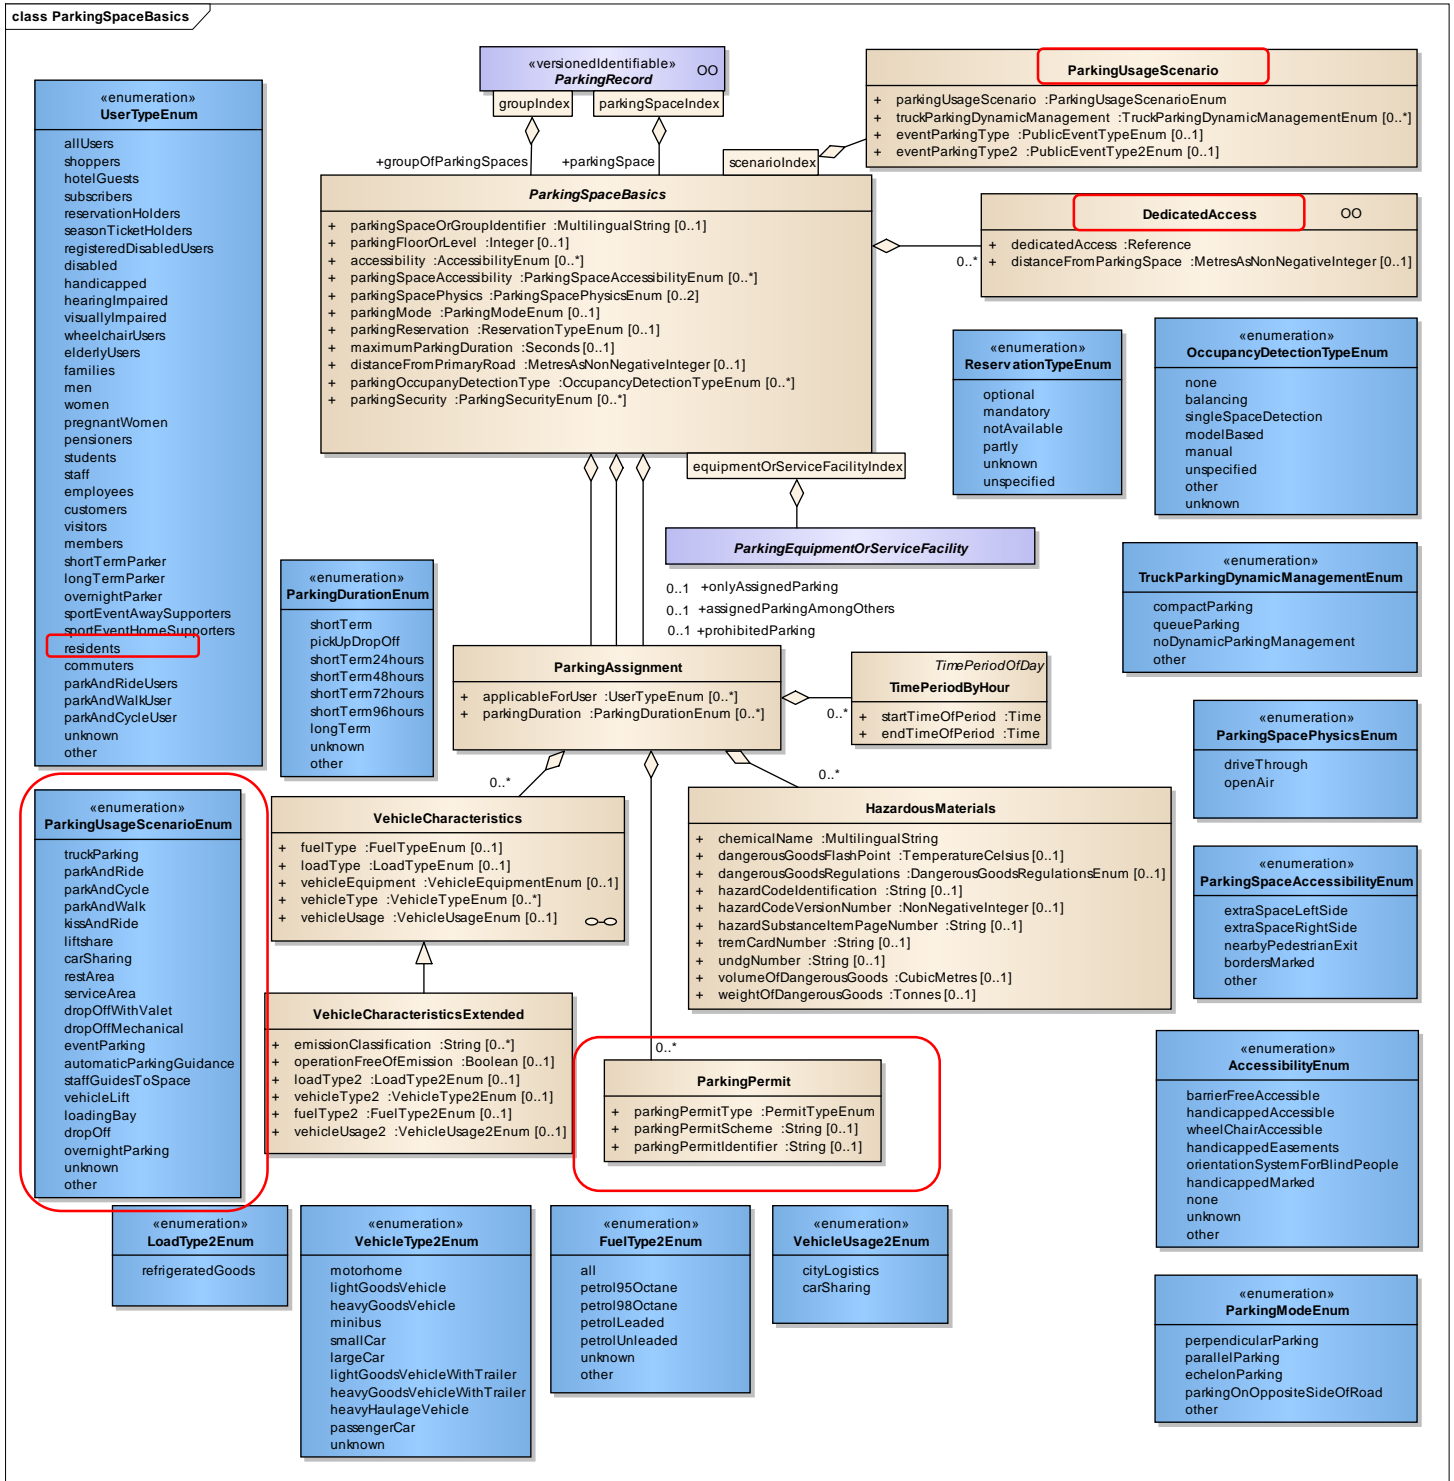

The data type of **chargeInterval** was changed to **Seconds**.

A **ChargeBand** is now *versionedIdentifiable* and there is a new component **ChargeBandByReference**. This allows to predefine and reuse **ChargeBands**.

Some roles and attributes were renamed using the term ‘applicable’ – see picture above.

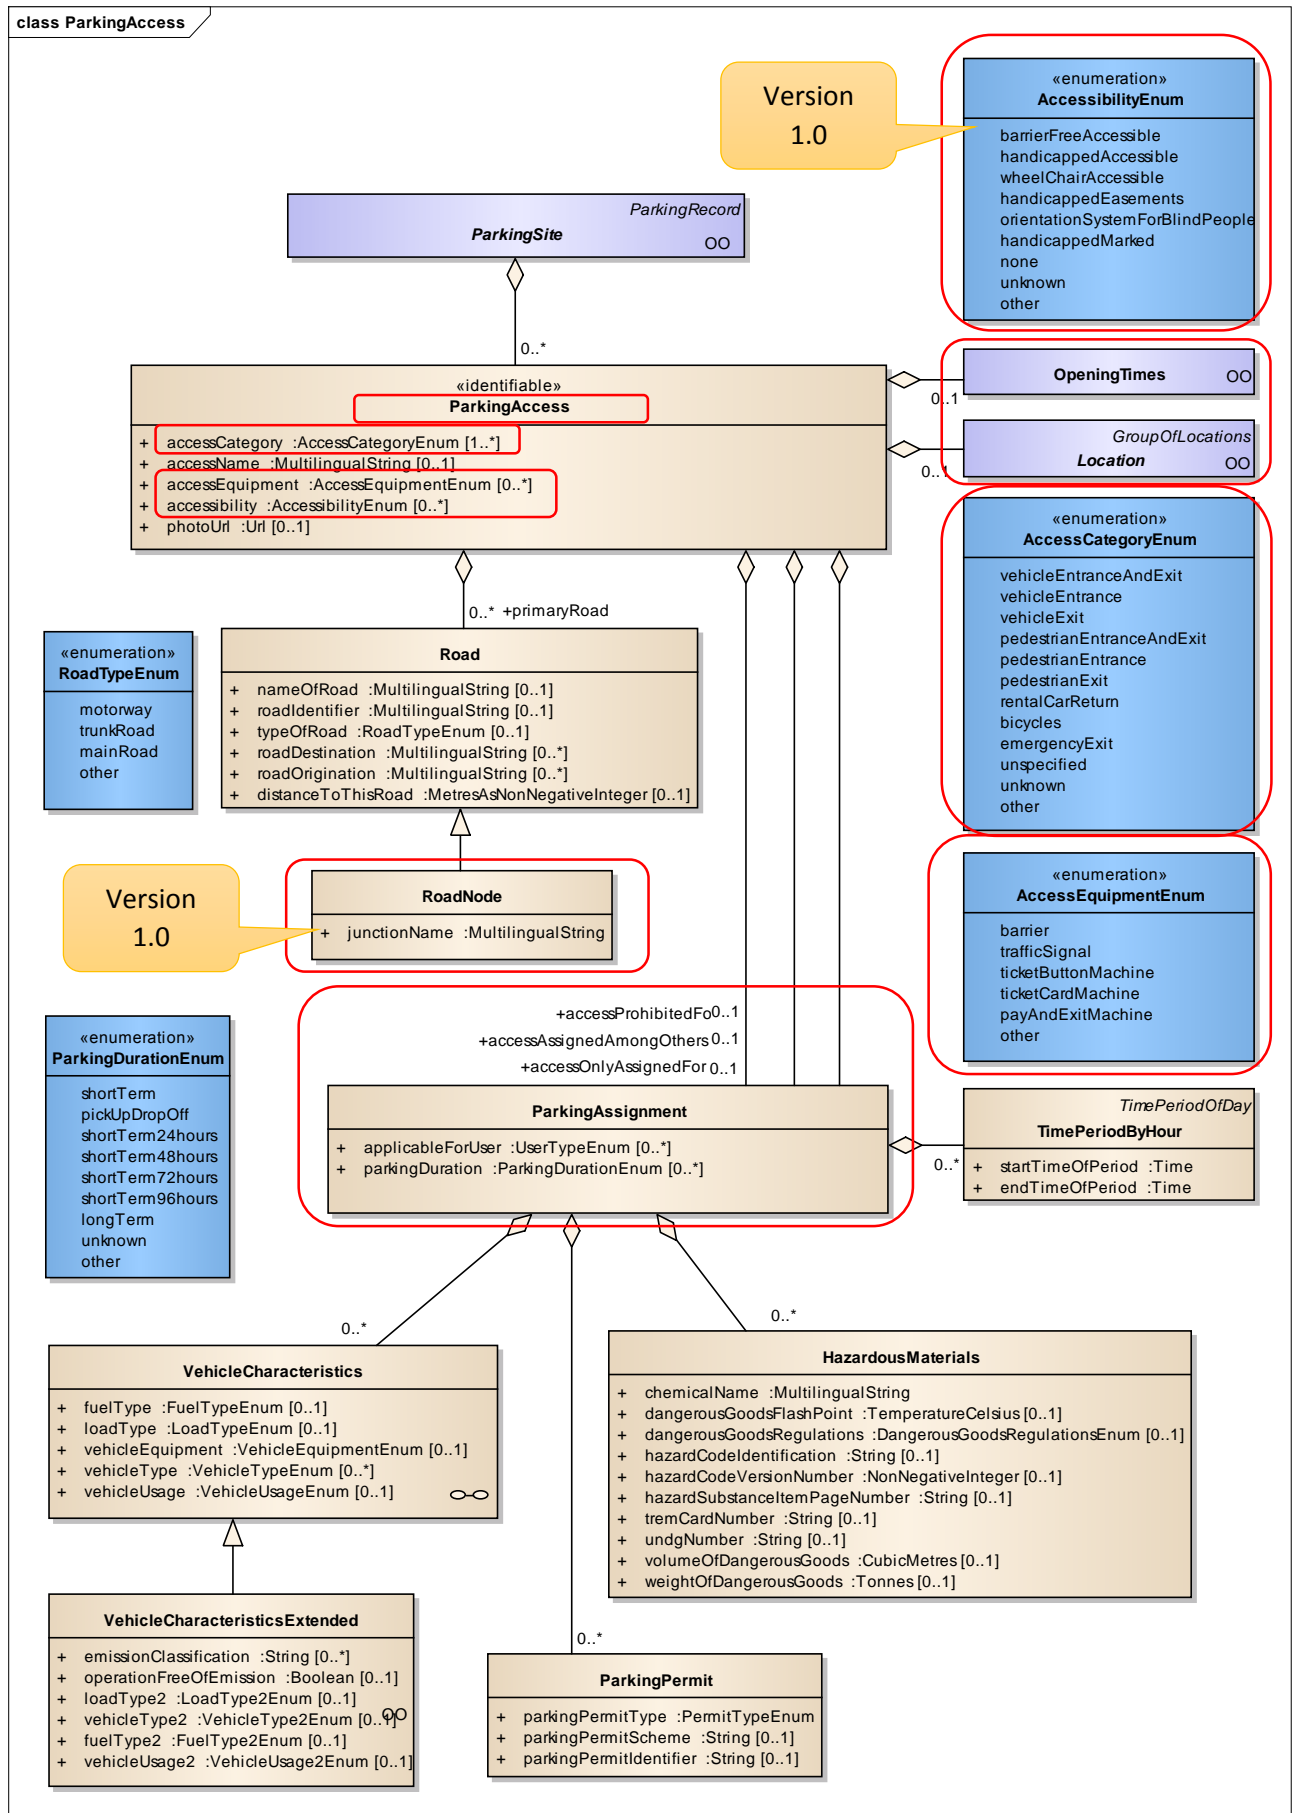

For **ParkingPermit** see next chapter “**Assignment**”.

Assignment

- Added component **ParkingPermit** with type (see enumeration values in picture), scheme and identifier. This incorporates user permits as well as vehicle permits.
- Deleted all permit-related attributes in **VehicleExtended**.
- Renamed **residentsWithPermit** within **UserTypeEnum** to **residents**.
- In addition, **ParkingPermit** is also added as an aggregation [0..*] to **ChargeBand** (not visualized here).

ParkingAccess (formerly called Entrance / Exit)

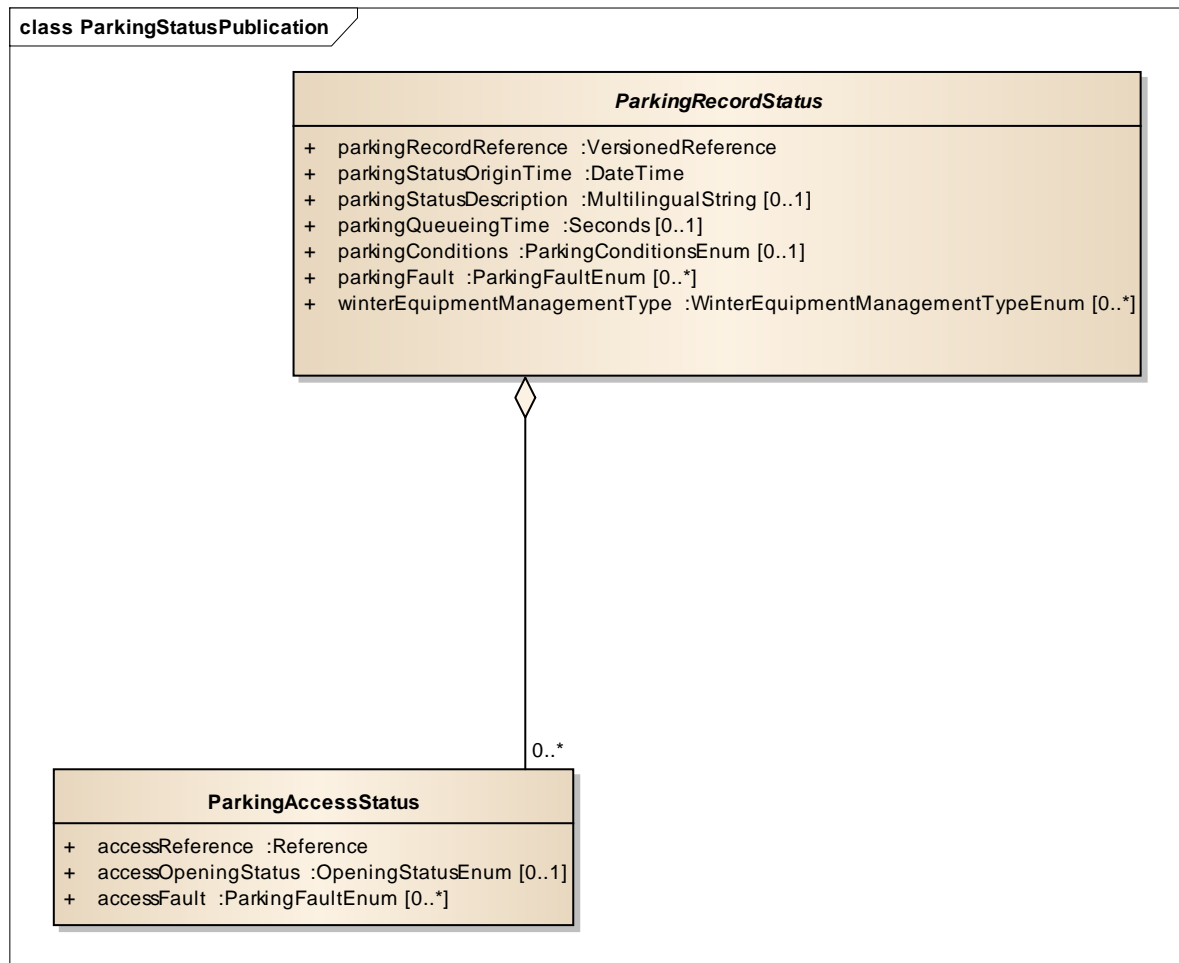

The **ParkingAssignment** structure (including **ParkingPermit** - see above) was attached to **ParkingAccess**.

The **Point** location was **changed** into **Location** to support for example **Linears**, too.

The **OpeningTimes** structure was attached and **accessEquipment** (incl. Enumeration) was added (some elements have been moved from **AccessCharacteristicsEnum**).

Some literals have been added to **AccessCharacteristicsEnum**.

There is a new component **ParkingAccessStatus** in the dynamic model to define the current opening- and fault-status:

Contact

Contact details are now splitted: A new **abstract** class **Contact** must be specialized either by a **ContactByReference** or by the **ContactDetails** class (which is now versioned identifiable).

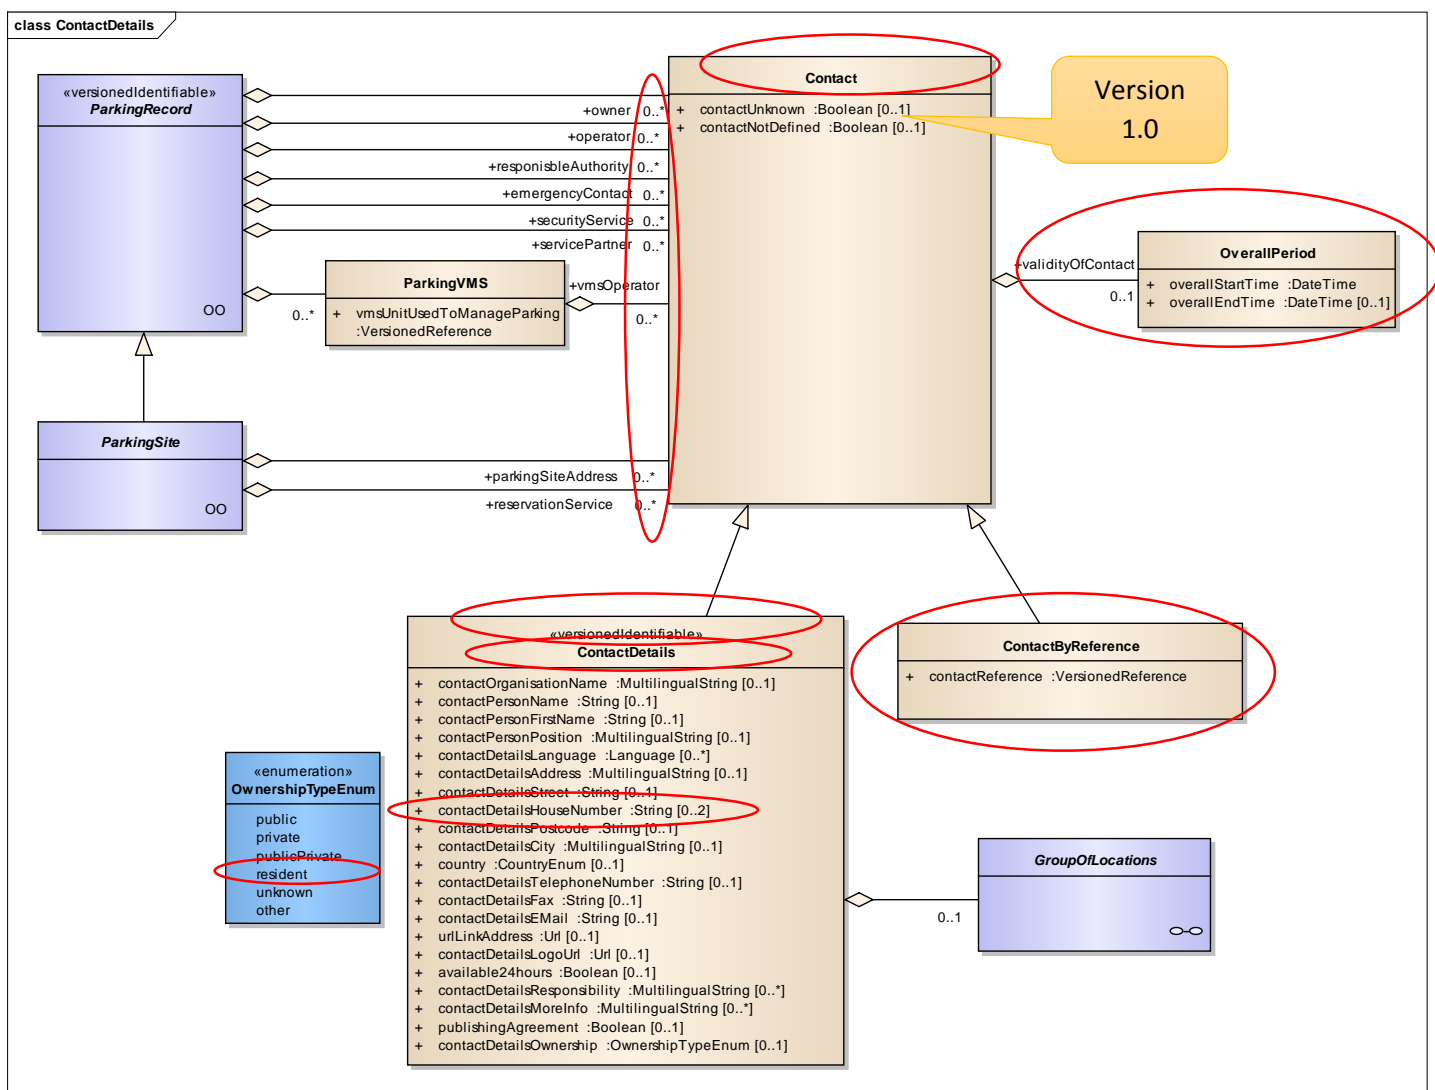

Note that there is no separate publication to specify a contact; you must include contact specifications within the specification of parking sites.

Further note that there is no distinction between a contact and an organisation; however, the first attribute was renamed to **contactOrganisationName**.

ContactDetailsStreetNumber was renamed to **ContactDetailsHouseNumber** and got a multiplicity of 0..2 to support up to two numbers (lower and upper).

Furthermore, a contact can be supplemented with a period of validity.

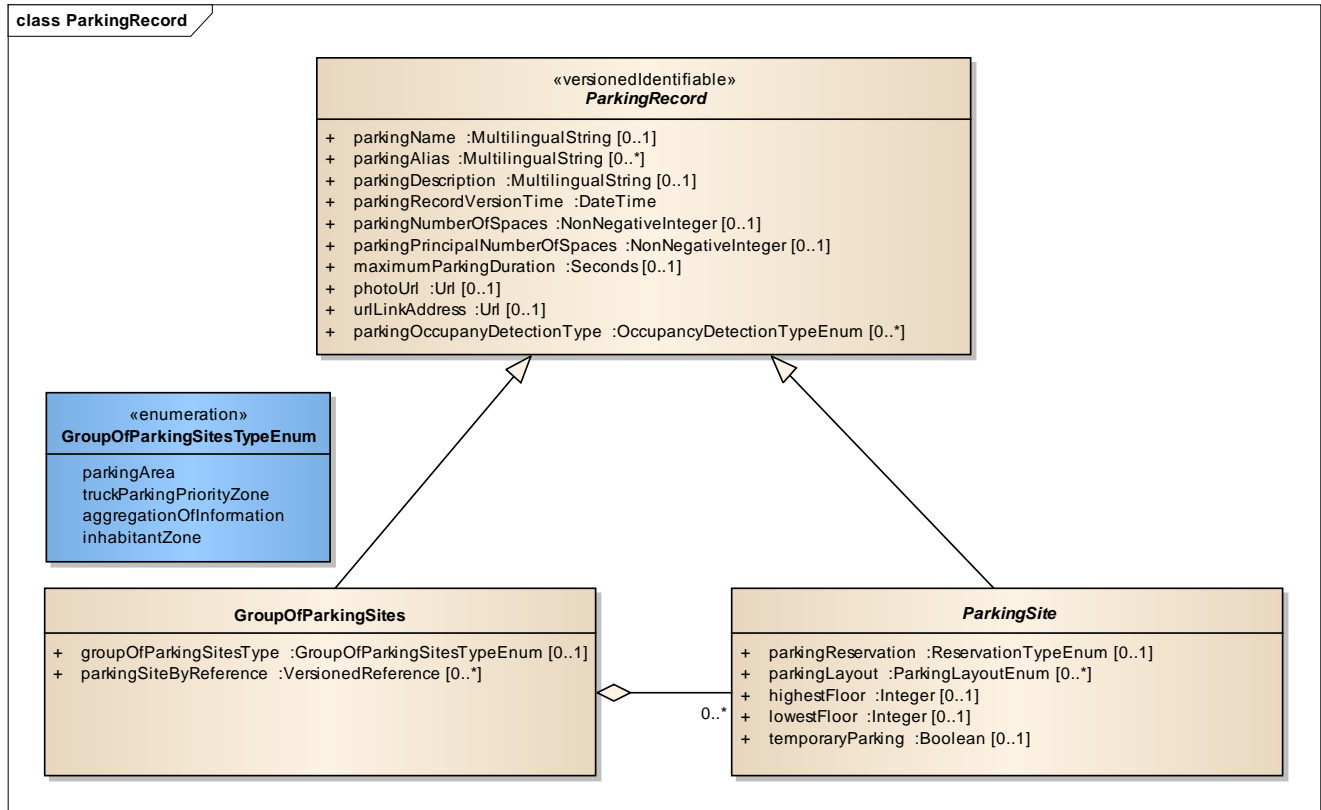

Please note, that all contact roles became a multiplicity of 0..* to support this concept with different validities (i.e. there is one operator until December 31, another one from January, 1st, for example).

ParkingRecord and GroupOfParkingSites (formerly called ParkingArea)

ParkingArea was renamed to **GroupOfParkingSites**. There is a new type enum for it (optional). Especially, it is possible, to indicate a **truckParkingPriorityZone** now.

The attribute **urlLinkAdress** was added.

ParkingSite (formerly called ParkingFacility)

Rearrangement of classes and Specialisations, see picture.

All “facility”-fragements were renamed to “site”.

TruckParking is now a literal of **ParkingScenario** (see there).

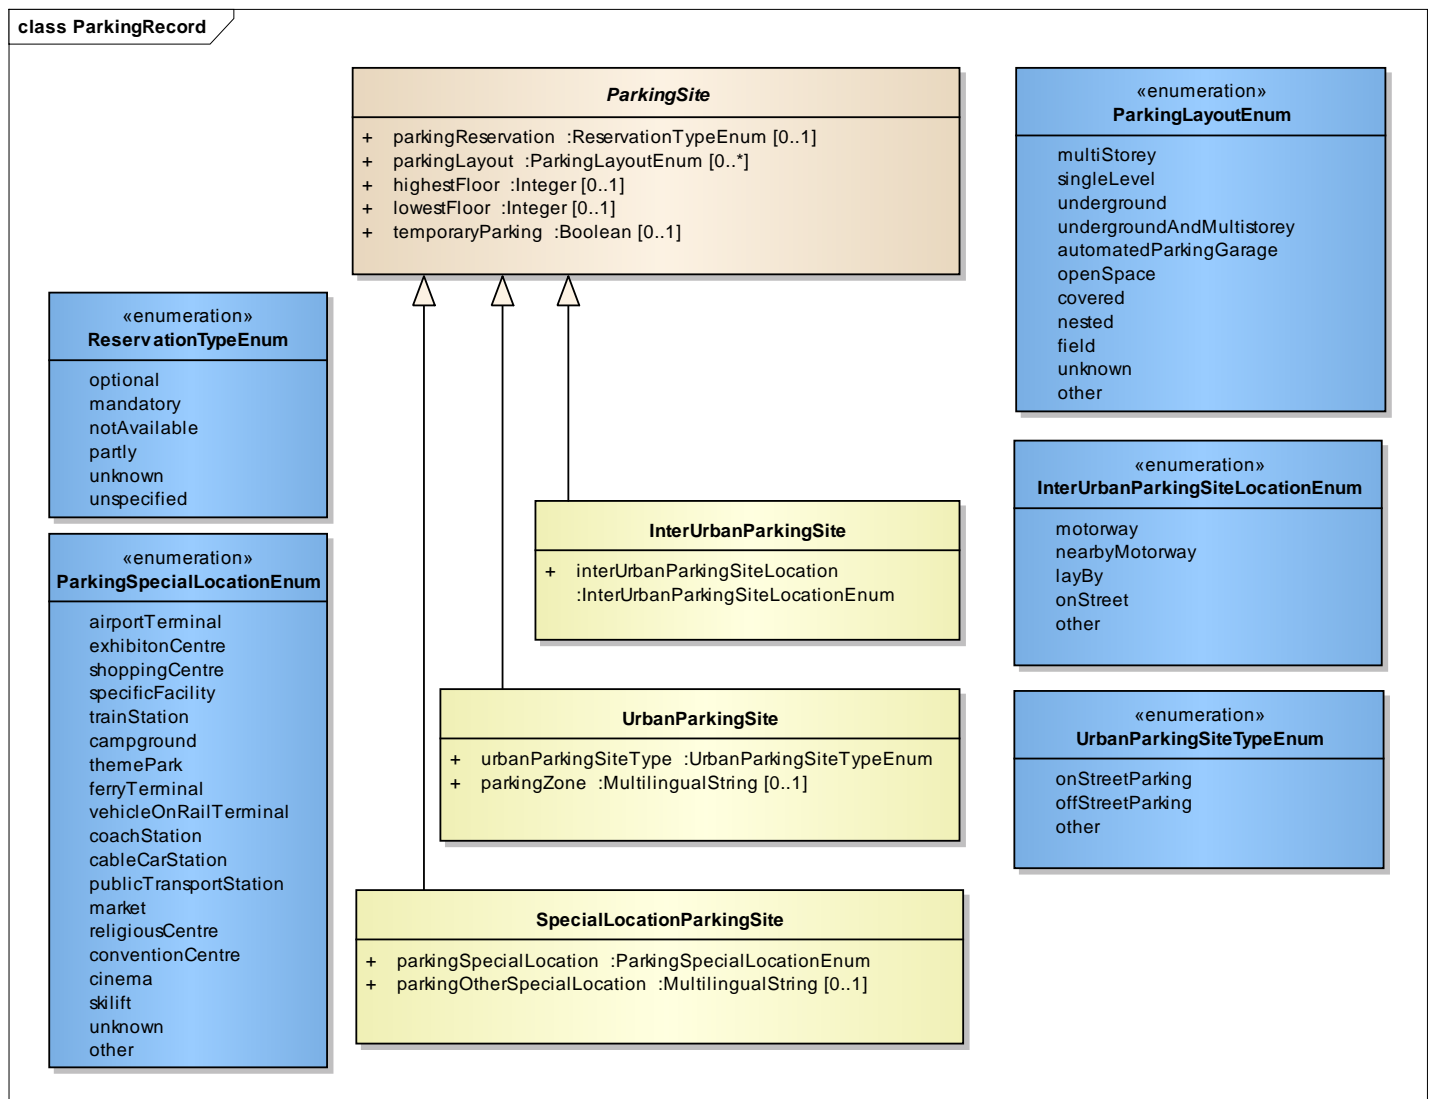

parkingLayout was moved to **ParkingSite** (formerly, it was part of **UrbanParkingSite** as well as of **SpecialLocationParkingSite**).

parkingVisualGuidanceSystem (formerly part of a **ParkingSite**) is now a literal of ScenarioEnum:
autmaticGuidanceSystem (with respect to TPEK PKI008).

ParkingSpecialLocationEnum got new literals to fully support TPEG PKI014.

truckParking is now part of **ParkingUsageScenarioEnum** (i.e. a literal), not a separate aggregation or specialisation any longer (see chapter Assignment for visualisation).

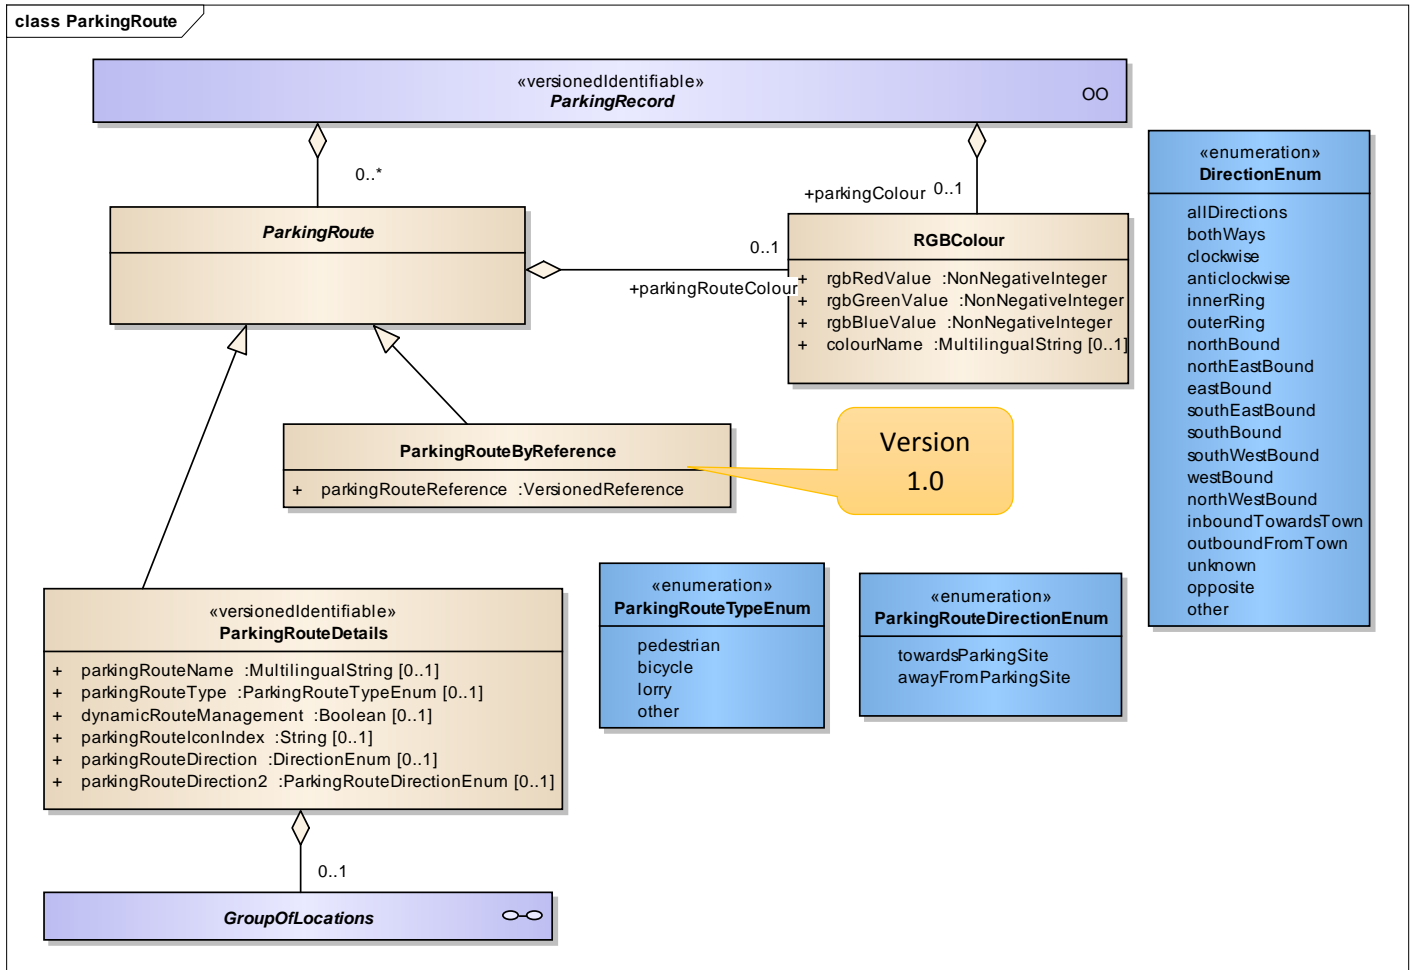

The attribute **truckParkingDynamicManagement** now moved to **ParkingUsageScenario** (only valid for the scenario truckParking) (see chapter Assignment for visualisation).

ParkingRoute (Belgium)

A **ParkingRoute** got some additional elements, see picture.

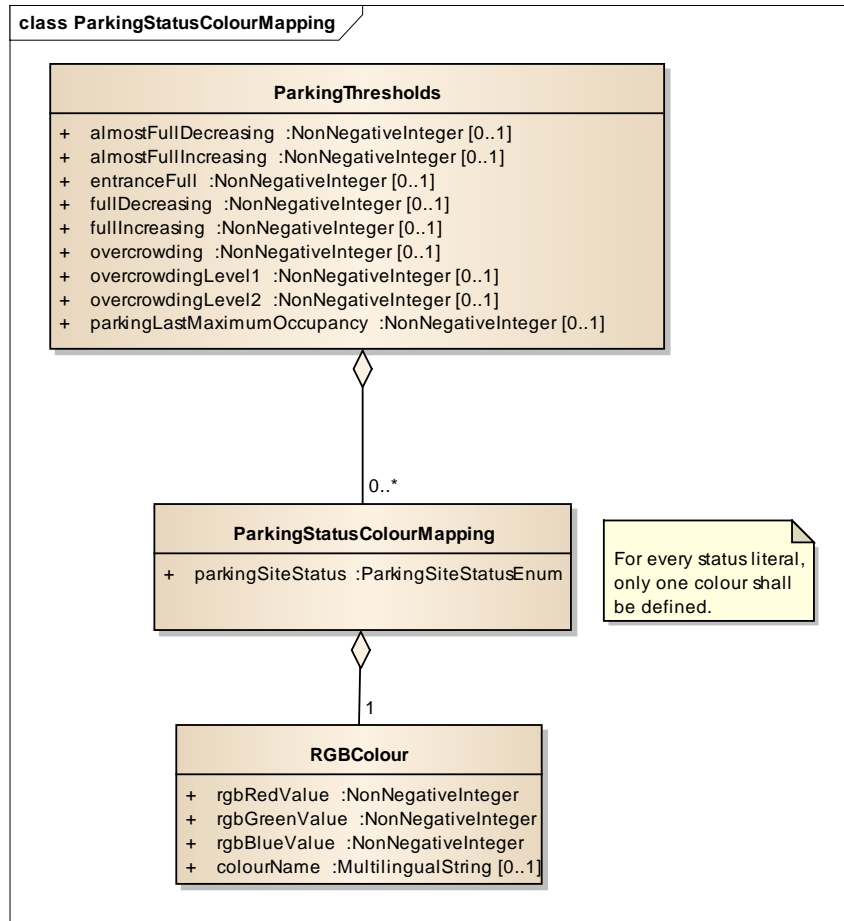

DirectionEnum is from Level A, whereas the **ParkingRouteDirectionEnum** offers two additional literals.

ParkingStatusColourMapping (Belgium) and Thresholds

Defines mappings for the **parkingSiteStatus** and a corresponding colour.

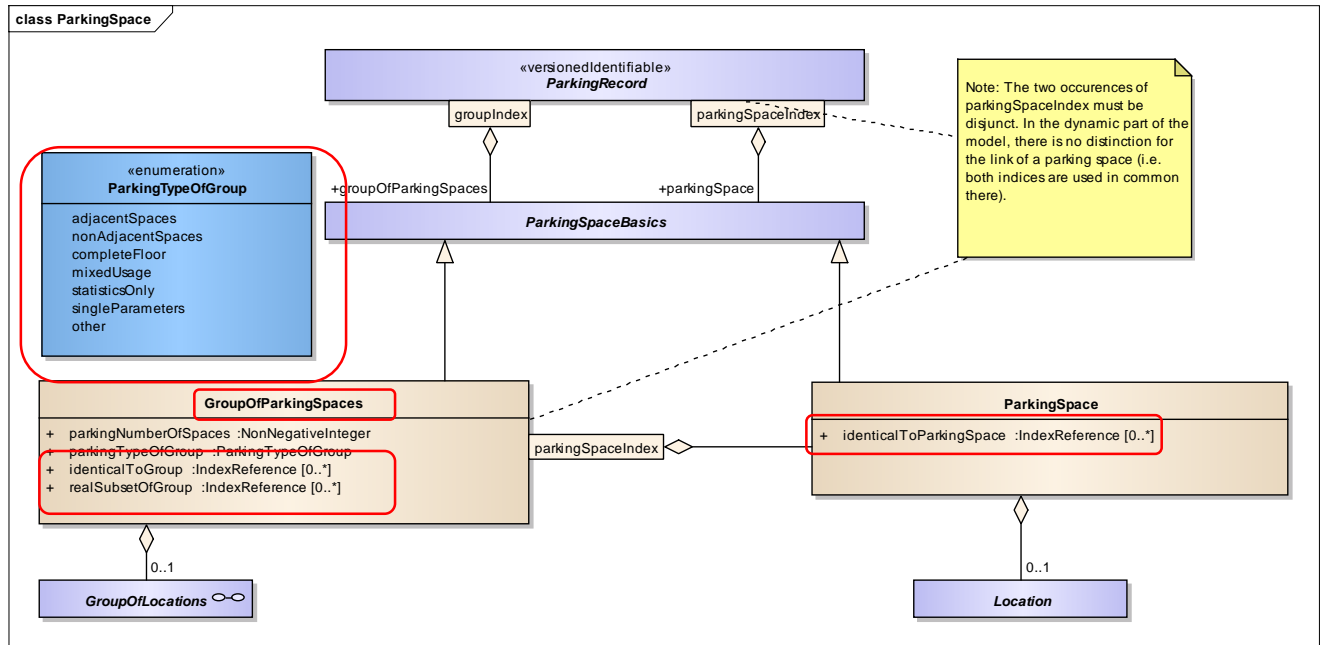

This construct is available as well in the static part of the model as well as in the dynamic part (to override this information).

The term **overcrowded** was replaced by **overcrowding** in a number of attributes.

Parking Space / GroupOfParkingSpaces

Some class names and attribute names have been improved; a new type for **GroupOfParkingSpaces** was introduced.

ParkingEquipmentOrServiceFacility (formerly called Infrastructure)

ParkingInfrastructure was renamed to **ParkingEquipmentOrServiceFacility** (packages and definitions have been adopted, as well).

The **quantityOf...** attributes were renamed to **numberOf...**

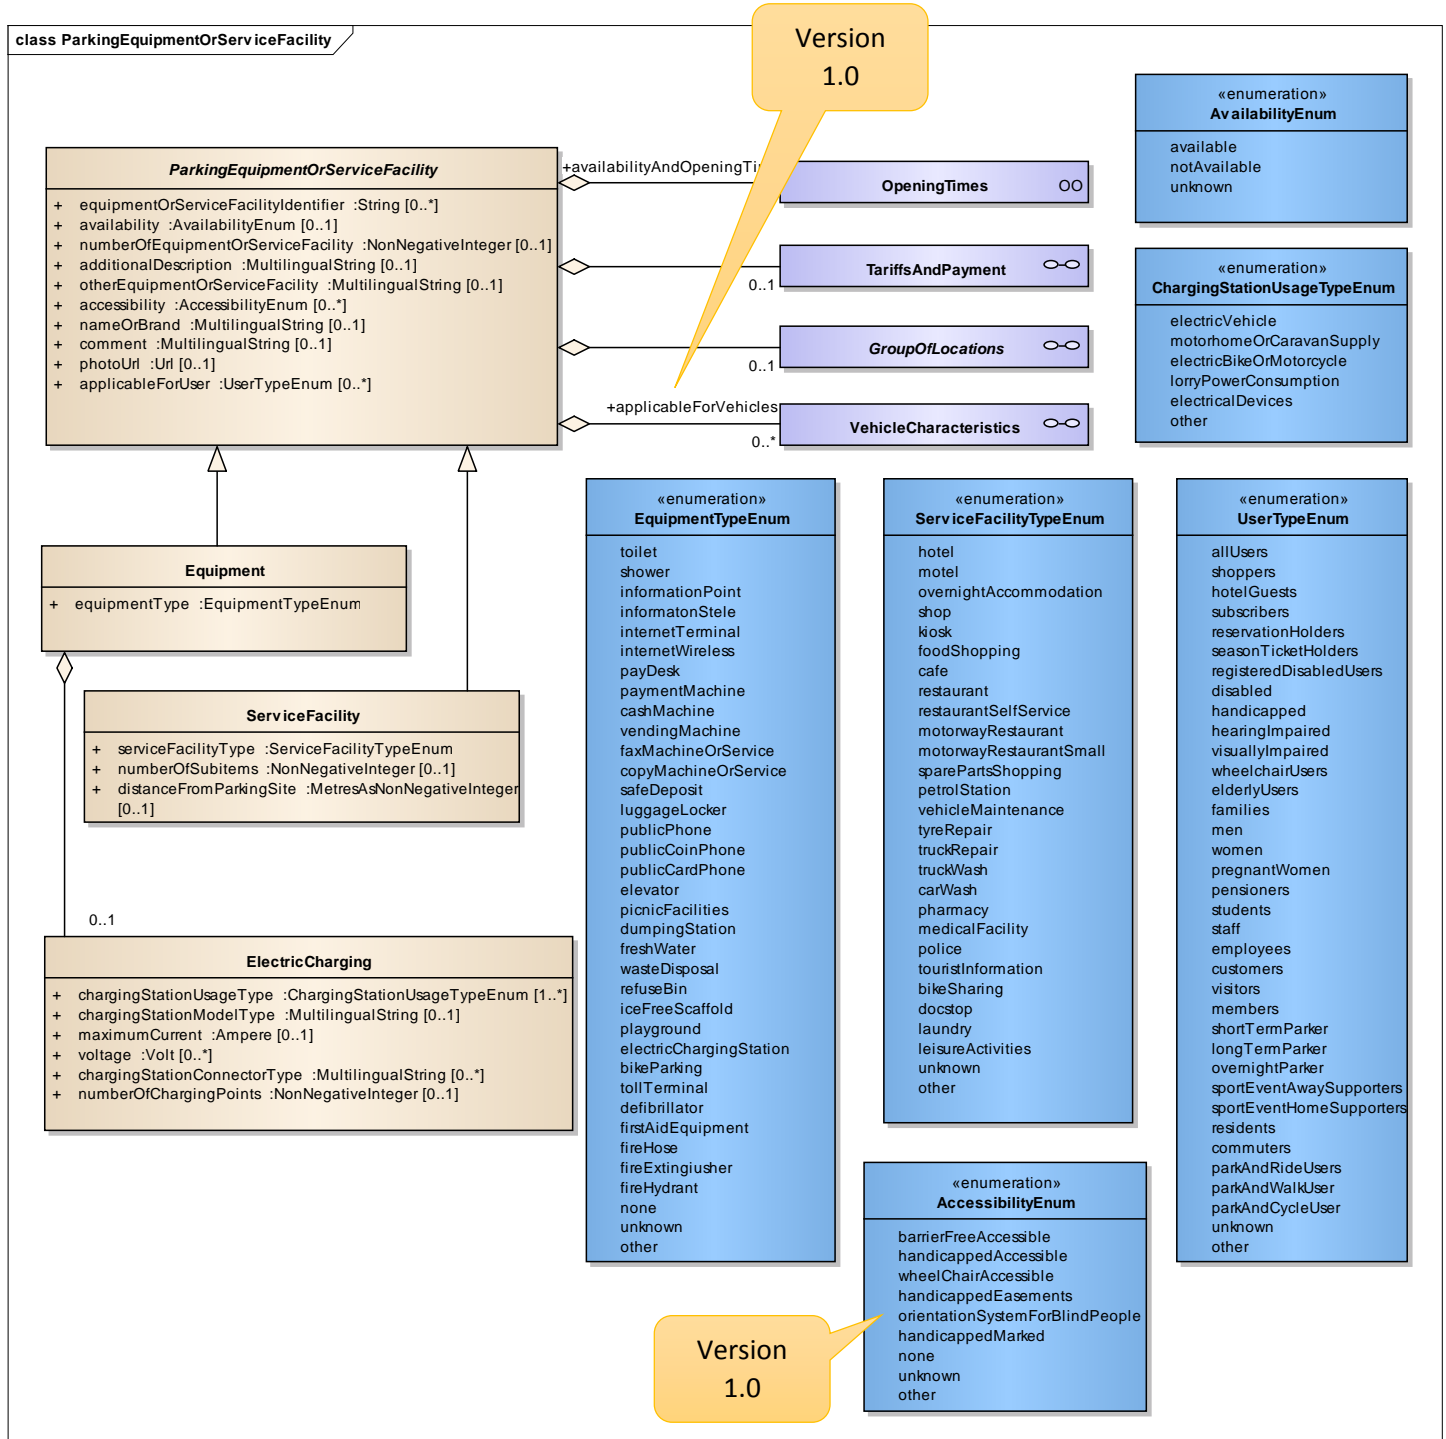

Announcing availability (comment NL 014) is already possible by using the **OpeningTimes** class; a role name was added to better point out this possibility.

ParkingSecenario was removed from this package (see next chapter).

ElectricCharging is a new name for the component **ElectricChargingStationAdditionalDescription**; nearly all its attributes have been renamed, too.

The **numberOfChargingPoints** now equals the number of vehicles, which can be loaded simultaneously over all charging stations defined with the **numberOf...** attribute.

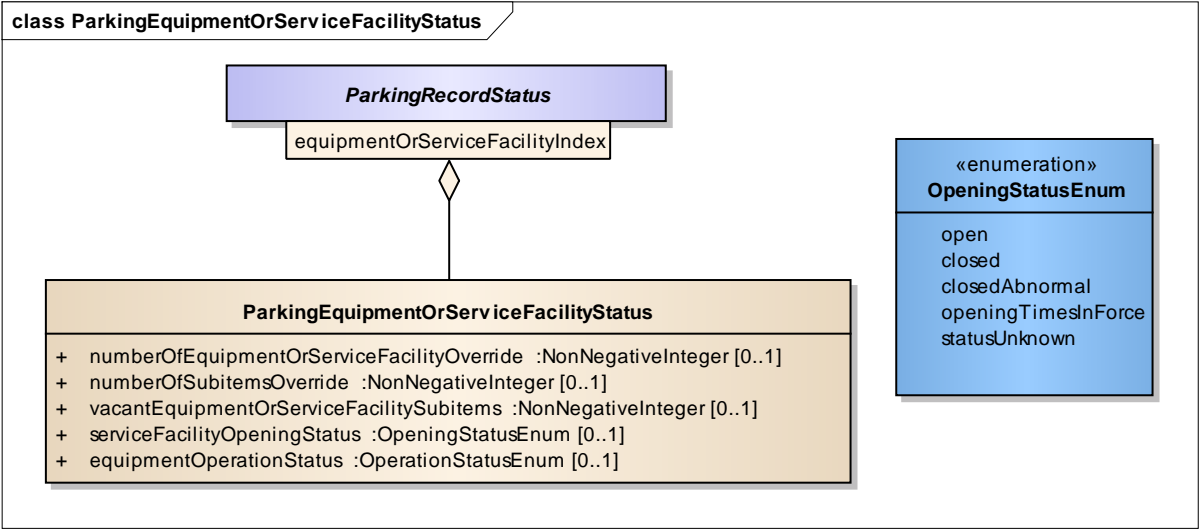

The static part now looks like this:

Added several new attributes to **EquipmentTypeEnum** and **restaurantSelfService** to **ServiceFacilityTypeEnum**.

A new attribute **equipmentOrServiceFacilityIdentifier** [0..*] was introduced on request from CEN-comment form (NL 013). The definition is: "An internal identifier for the equipment or service facility, e.g. an inventory number. This attribute has got unbounded multiplicity to support identifiers for multiple occurrences of this element."

The dynamic part looks like this:

ParkingUsageScenario

Scenarios have been moved out from the infrastructure package. A **ParkingUsageScenario** is now directly associated with the **ParkingSite** as well as with **GroupOfParkingSpaces**.

truckParking, **serviceArea**, **parkAndCycle** as well as **parkAndWalk** have been added; **automaticParkingGuidance**, **staffGuidesToSpace** and **vehicleLift** have been added with respect to TPEG PKI008. Furthermore, **dropOff**, **overnight** and **loadingBay** were added.

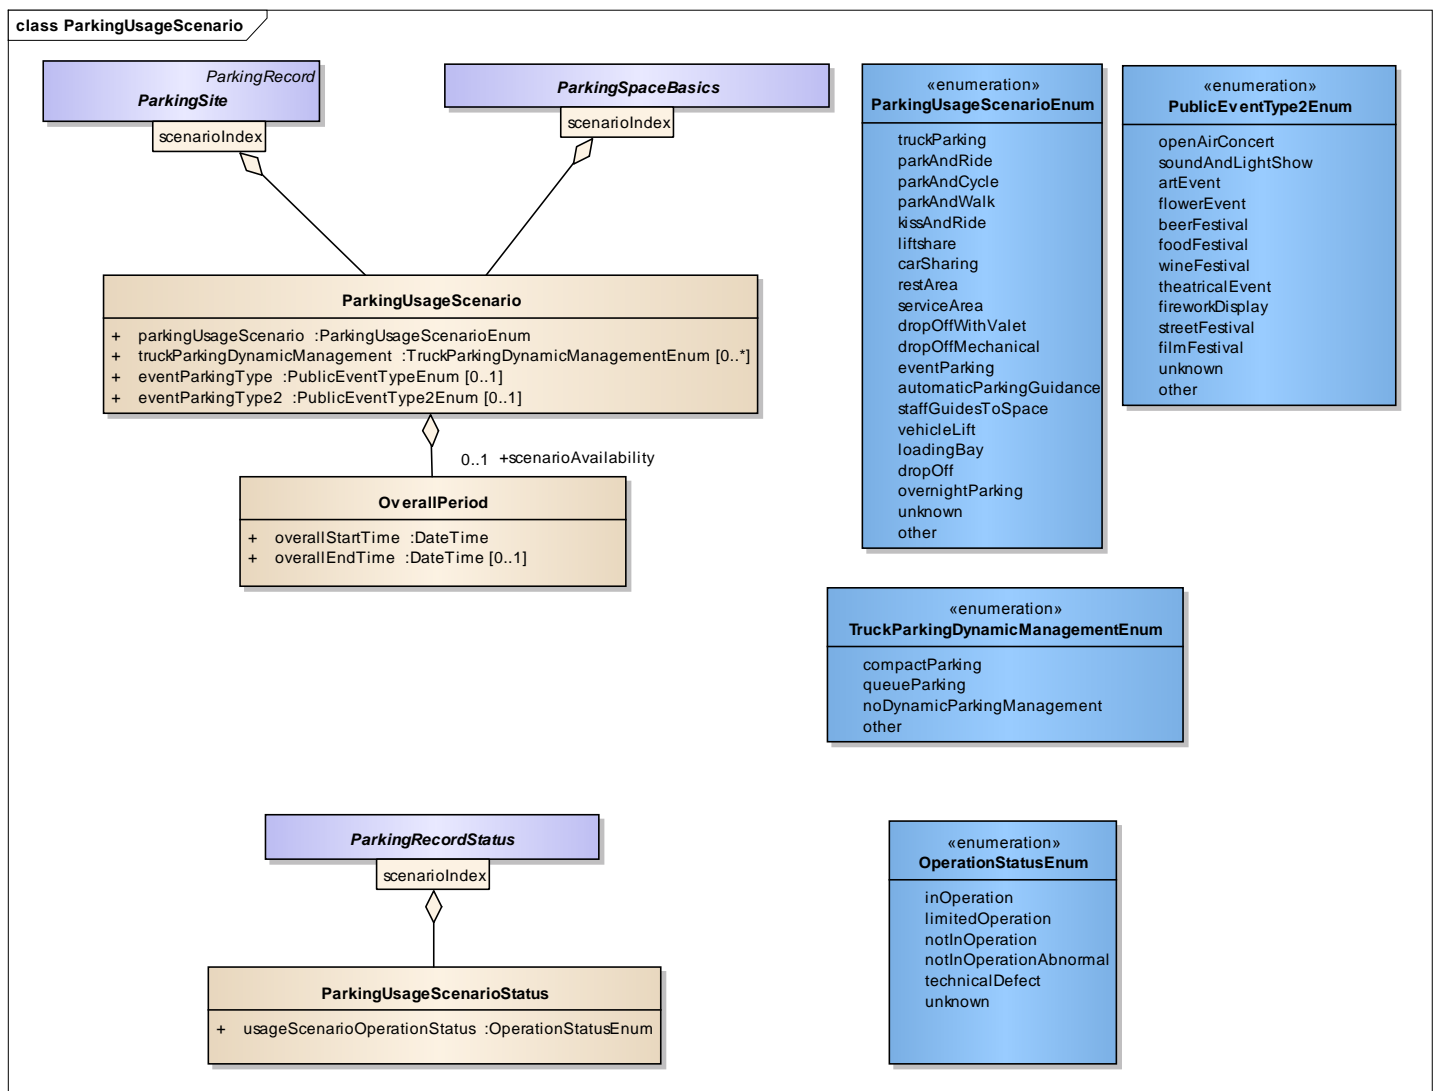

The attribute **truckParkingDynamicManagement** does not need to be part of **ParkingSpaceBasics** any longer, because its now part of the **ParkingUsageScenario** (i.e. you can define this more flexible now for parking spaces or groups of parking spaces).

A **scenarioAvailability** role has been added.

To support TPEG PKI006 “EventType”, an **eventParking** has been introduced as literal and enumerated attribute (splitted into a Level A and Level B enumeration).

Note: To specify the number of spaces, for instance for **parkAndRide**, a **groupOfParkingSpaces** must be specified, where **parkingNumberOfSpaces** can be specified. This also allows an exact specification of geo-reference.

The following picture shows both, the static as well as the dynamic part.

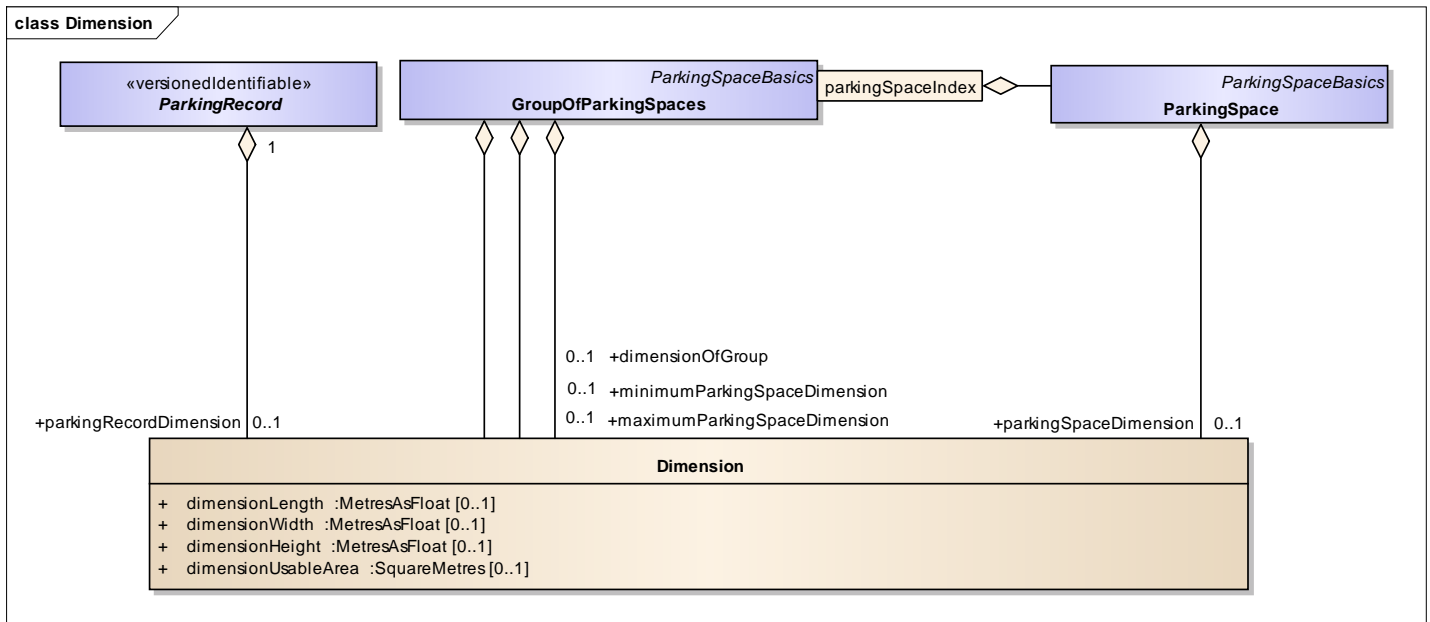

Dimensions

All attributes of the **Dimensions** component became the prefix “dimension”. This is to distinguish the attribute **dimensionHeight** (formerly **ceiling**) from the TPEG-LOC attribute **height**.

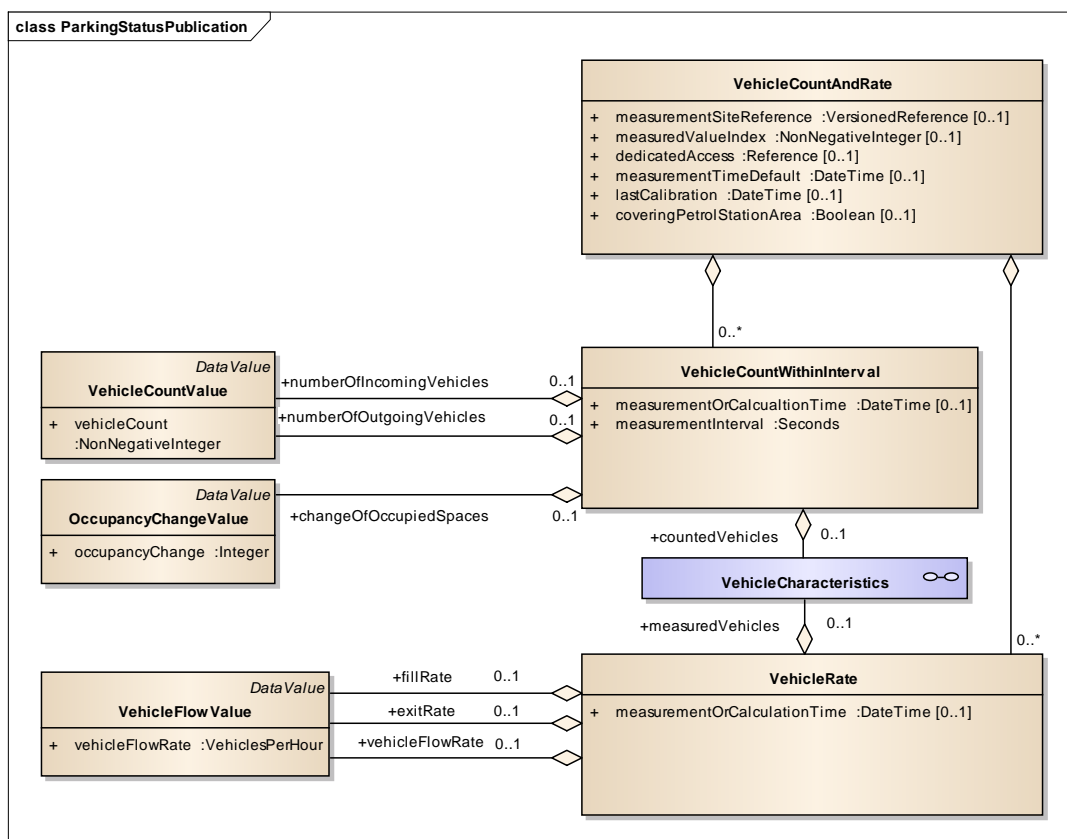

The **maximumParkingSpaceDimension** was added.

The following picture shows all aggregations for the class **Dimension**.

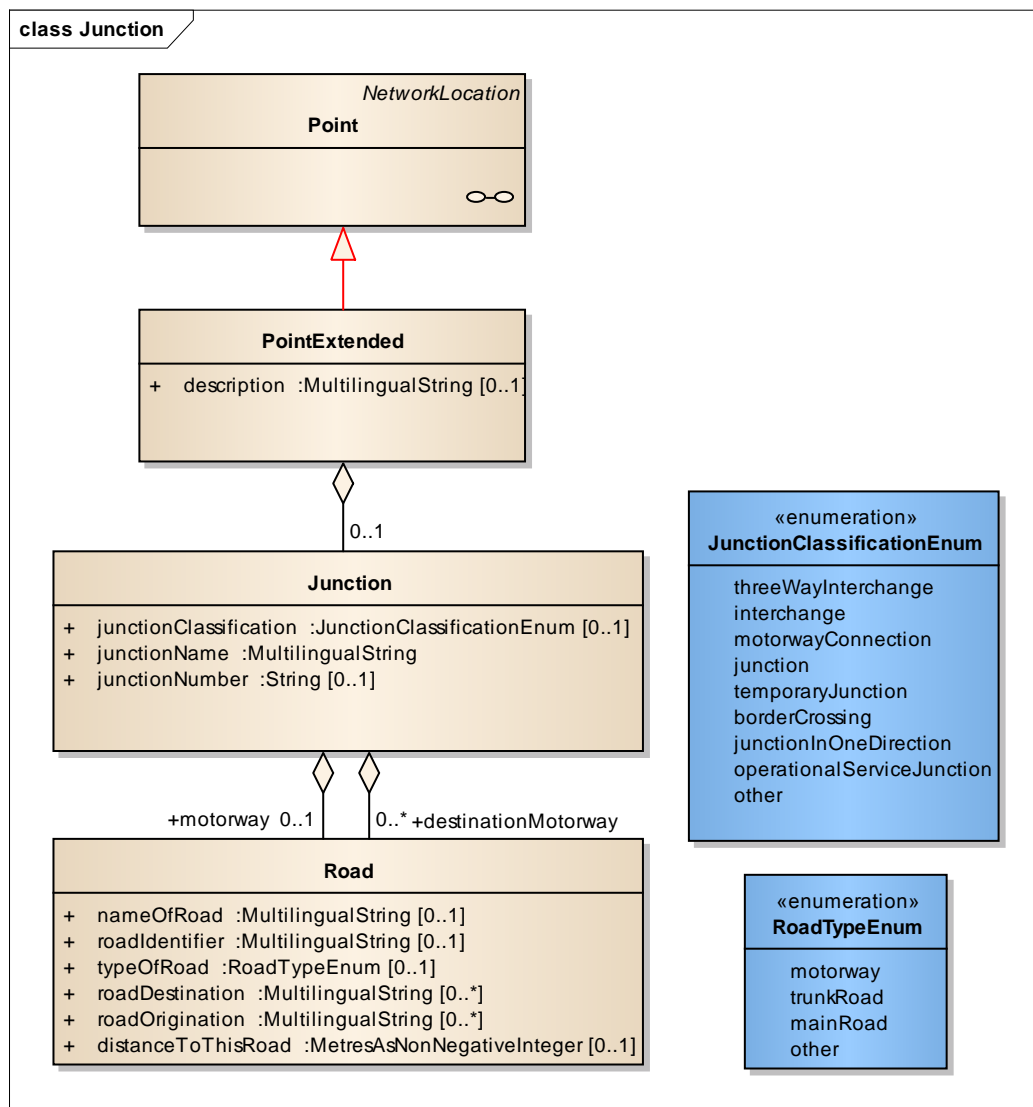

VehicleCountAndRate (dynamic)

Several changes in attribute names to improve their semantic aspect. Especially the prefix “parking” was omitted in this section.

Road

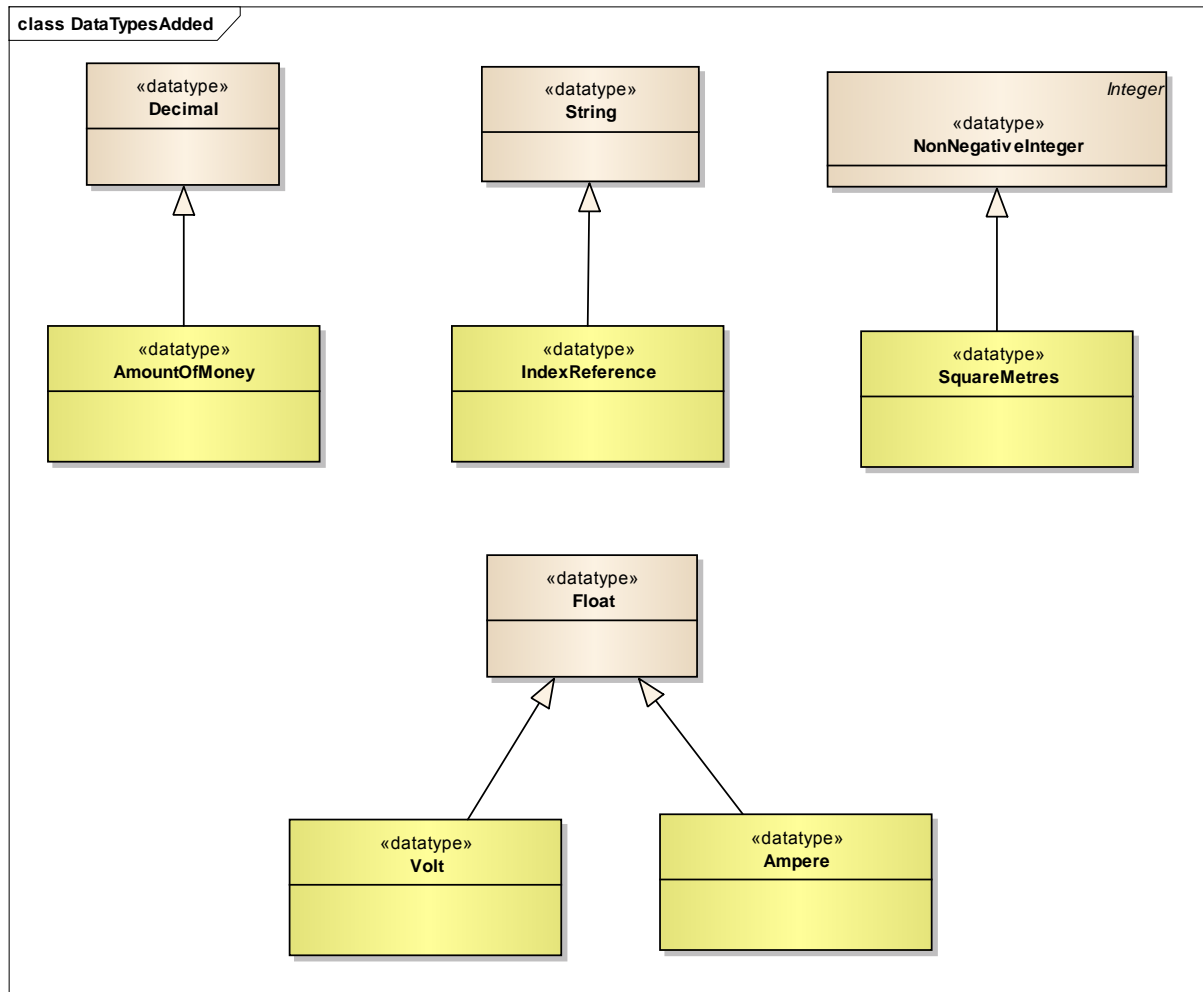

In the **Road** class, the name of several attributes have been changed or improved.

There is a new role for **destinationMotorway**, to be used with the motorway intersection junction types.

Others

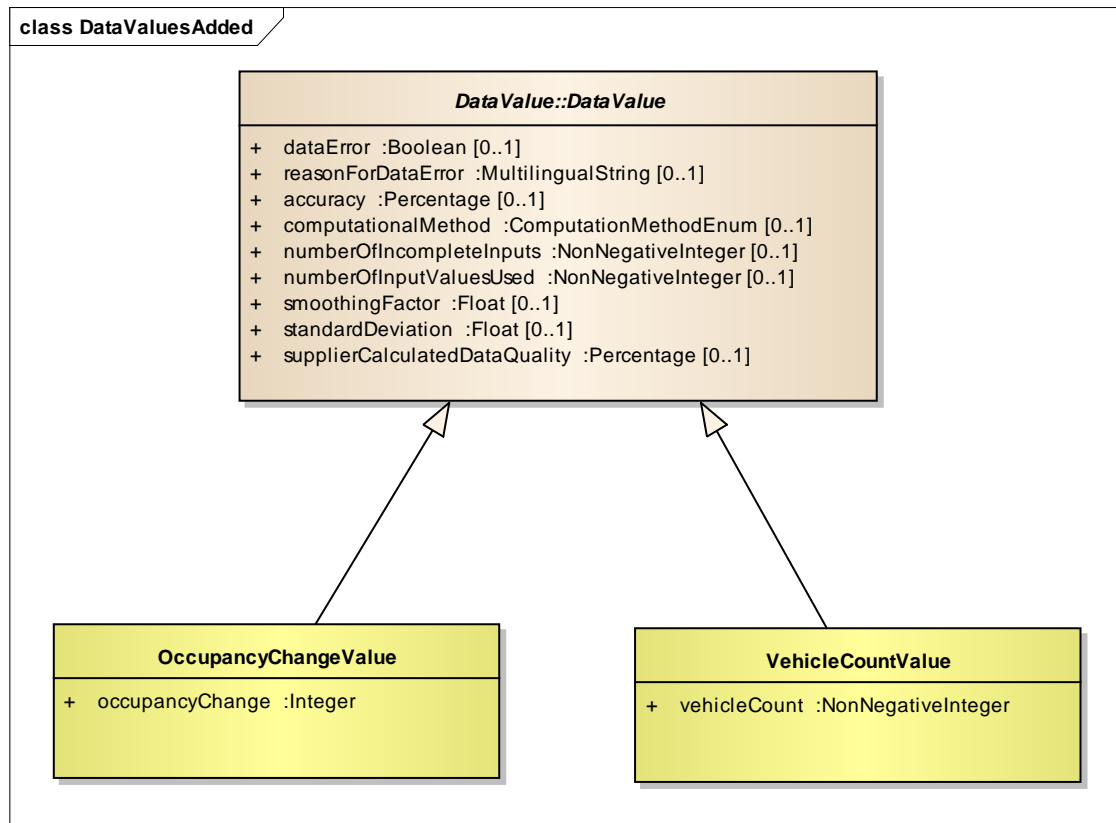

- Renamed Package “ParkingModel” into “ParkingPublications”.
- Renamed data type **Money** to **AmountOfMoney**
- The attribute **equipmentOperationStatus** was added to the dynamic model.
- Added **dateOfCertification** and **certifiedSecureParking** (Boolean) to **ParkingStandardsAndSecurity**.
- For a number of enumerations the literal **other** has been added.

Overview of all new data types introduced with the ParkingPublications

(Hours, Minutes and Kilometres, formally proposed, have been removed).

Overview of all new data values introduced with the ParkingPublications

Some important definitions:

ParkingTablePublication: A publication defining one or more tables that have entries of parking sites or groups of them, located in an urban or interurban context.

ParkingTable: A collection of parking records, which can be parking sites or groups of parking sites.

ParkingRecord: A container for static parking information. Must be specialised as a parking site or as a group of parking sites.

GroupOfParkingSites: A logical composition of parking sites with aggregated properties (e.g. number of spaces). Examples: Urban parking area "West" or all truck parkings along a motorway. The included parking sites may -but must not- be specified as subcomponents.

ParkingSite: A record containing static details of a parking site. Must be specialised as an Urban- or InterUrbanParkingSite or a SpecialLocationParkingSite.

InterUrbanParkingSite: A parking site in an interurban context.

UrbanParkingSite: A parking site in an urban context.

SpecialLocationParkingSite: A parking site which is located at a special location, often associated with some building.

truckParking: The parking site is designed for lorries (other vehicles are allowed as well).
